[ Traceability as never seen before ]

## IMPLANT CARD

Discover the new Mozo-Grau implantological identification card

The Implant Card® holds the Código Explorer® code that allows the patient to have full traceability and knowledge of the implant he/she is wearing at anytime and everywhere.

Where is  
Código Explorer®?

## RCD-coated Drills

- Diamond-like-carbon coating
- Accuracy during drilling procedure
- Increased visibility thanks to high contrast markings
- Improved cutting capacity
- High resistance to corrosion
- Longer drill lifespan
- To be used with Mozo-Grau Drill stops

## RCD Drill Stop Set

- Facilitates drill-stop assembly and dismantling
- Allows easy drill-stop recognition
- Numeric distribution and colour-code identification

## Drill Stops

- Precise depth control
- 3 Drill-stop types
- High visibility
- Optimal vision of the treated area
- Additional Security
- To be used with RCD-coated drills only

Thanks to MG Bio-CAM®, Mozo-Grau positions itself at the forefront of systems for manufacturing customized prosthetic solutions.

With MG Bio-CAM®, Mozo Grau offers a milling service of abutments, crowns, bridges and structures compatible with the most important dental implant systems and produced either in chrome-cobalt and titanium
